

Yitzhak Binyamin

Full Stack Developer | Java (3 yrs production) | React & Node.js

Yitzhakbin9@gmail.com | 052-585-8770 | Rishon Lezion | [LinkedIn](#)

Summary

Software Engineer with 3 years of experience developing production Java applications for large-scale enterprise systems at Bank Hapoalim. Experienced in modernizing legacy applications by integrating client-side Java services with RESTful backend systems, **collaborating with cross-functional teams** to deliver reliable software in complex production environments.

Expanded into modern Full Stack development through hands-on projects using **React, Node.js, TypeScript, MongoDB**, Firebase, and REST APIs, **building end-to-end web applications from backend to frontend**. Strong foundation in OOP, clean code principles, and collaborative software development. Eager to bring both enterprise development experience and modern Full Stack skills to a product-driven engineering team

Experience

Frontend Java Developer, Bank Hapoalim: 2022 - 2025

- Partnered with a systems analyst to analyze and document undocumented business logic embedded in the frontend, as part of a large engineering team modernizing a legacy Mainframe-based monolith into Spring/Java microservices.
- Migrated 5 core, daily-use client screens from Mainframe to the new backend, managing hybrid states where a single screen called both systems simultaneously while preserving business logic integrity.
- Contributed to an initiative that eliminated the bank's dependency on Mainframe infrastructure and an external IBM-managed service, moving core backend ownership fully in-house.
- Collaborated cross-functionally with systems analysts, backend engineers, and QA throughout the development lifecycle, translating business requirements into implementation and validating frontend-backend data contracts for one of Israel's largest banking systems.

Projects

Full Stack E-Commerce Web Application (React & Firebase)

(admin: admin@gmail.com, password: admin1234.

customer: test@gmail.com, password: 123456)

- Designed and built a full-stack e-commerce platform supporting Admin and Customer workflows, including product management, shopping cart, and order processing.

- Implemented secure authentication and role-based authorization using Firebase Authentication and Firestore, enabling personalized user experiences and protected administrative functionality.
- Developed responsive React interfaces with reusable components, state management, and analytics dashboards to visualize sales performance and customer activity.

Backend Factory Management System (Node.js & MongoDB)

(username: admin, mail: admin@gmail.com)

- Designed and developed a RESTful backend for managing employees, departments, shifts, and users using Node.js, Express, and MongoDB.
- Implemented authentication, authorization, business-rule validation, and activity logging to enforce system constraints and secure application access.
- Structured the application using a layered architecture with routers, controllers, and data access layers, improving maintainability and separation of concerns.

Technical Skills

Backend

Java, Node.js, REST APIs, JWT

Frontend

TypeScript, JavaScript, React, Redux

Databases

Firebase Firestore, MongoDB, SQL

DevOps & Tools

Git, GitHub, Bitbucket, Jenkins, CI/CD

Other

OOP, Algorithms, Data Structures, MVC, Agile, Jira, Confluence

Education

Yaniv Arad - Tech Training Labs 2025

Full Stack Development Program

Java & Spring Back-end bootcamp 2022

Ariel University 2016 - 2020

B.Sc. Computer Science & Mathematics
